Subject Index of Volume 66

Agglomeration
effect of water content of organic fluids on, of glass particles, 53
using conductivity method to study simultaneous Ostwald ripening and, of potassium sulphate in its saturated aqueous solution, 75
Aluminium
thermomechanical deformation of powder-based porous Al:
constitutive model including densification hardening, 21
evolution of pore structure, 9

Bed-collapsing technique
new, for measuring dense phase properties of gas-fluidized beds, 249
Binary mixtures
packing and fluidization properties of, of spherical particles, 259

Carbons
modelling fragmentation by percolation in combustion of, 47
Clusters
micro-visualization of, in fast fluidized bed, 231
Coal ash particles
attrition of, in fluidized bed, 41
Combustion
modelling fragmentation by percolation in, of carbons, 47
Compaction behaviour
of particulate materials: elucidation based on percolation theory, 265
Conductimetry method
using, to study simultaneous Ostwald ripening and agglomeration of potassium sulphate in its saturated aqueous solution, 75
Cyclone pressure drop
and efficiency with an without inlet vane, 143
Cylindrical pipe
flow of suspension of fine particles around steel ball fixed in, 285

Dense phase properties
new bed-collapsing technique for measuring, of gas-fluidized beds, 249
Densification hardening
constitutive model including; thermomechanical deformation of powder-based porous Al, 21
Dispersion
optimal; conditions of, of Zr powders by pyrolysis of zirconium acetates, 237

Fast-bubble simulation
in 2-D fluidized bed: hydrodynamics of fluidization, 108
Fluidization
hydrodynamics of: fast-bubble simulation in 2-D fluidized bed, 108
influence of particle Reynolds number on voidage at, 97
Fluidization behaviour
and rheological behaviour of powders of different particle size distribution, 127
Fluidization properties
and packing properties of binary mixtures of spherical particles, 259
Fluidized bed(s)
attrition of coal ash particles in, 41
2-D: fast-bubble simulation in; hydrodynamics of fluidization, 108
effect of particle drag relationships on prediction of kinematic wave velocity in, 177
entrainment of solid particles from, 33
gas; micro-visualization of clusters in, 231
gas-; new bed-collapsing technique for measuring dense phase properties of, 249
gas–solid; determination of time that particles remain in, by magnetic tracing, 69
liquid; heat transfer between immersed wire and, 281
liquid; single-particle settling velocity through, 293
Fluidized powder
segregation in, of a continuous size distribution, 119
Fragmentation
modelling, by percolation in combustion of carbons, 47

Gas-fluidized beds
new bed-collapsing technique for measuring dense phase properties of, 249
Glass particles
effect of water content of organic fluids on agglomeration of, 53
Granular materials
particle size effect in microwave heating of, 225
regime boundaries of moisture in, 191
Graphite
production of fine flaky ground particles of potassium graphite intercalation compounds and potassium exfoliated graphite, 85

Heat transfer
between immersed wire and liquid fluidized bed, 281
Hydrodynamics
of fluidization: fast-bubble simulation in 2-D fluidized bed, 108

Intercalation compounds
production of fine flaky ground particles of potassium graphite, and potassium exfoliated graphite, 85

Elsevier Sequoia/Printed in The Netherlands

Kinematic wave velocity
effect of particle drag relationships on prediction of, in fluidized beds, 177

Liquid fluidized bed(s)
heat transfer between immersed wire and, 281
single-particle settling velocity through, 293
'Log–beta' *vs.* log–normal distribution
for particle populations with wide finite size range, 195

Magnetic tracing
determination of time that particles remain in gas–solid fluidized bed by, 69
Micro-visualization
of clusters in fast fluidized bed, 231
Microwave heating
particle size effect in, of granular materials, 225
Moisture
regime boundaries of, in granular materials, 191
Multiphase flow
comparisons of formulations of, 1
measurements in powder processing, 203

Organic fluids
effect of water content of, on agglomeration of glass particles, 53
Ostwald ripening
simultaneous; using conductivity method to study, and agglomeration of potassium sulphate in its saturated aqueous solution, 75

Packing properties
and fluidization properties of binary mixtures of spherical particles, 259
Particle drag relationships
effect of, on prediction of kinematic wave velocity in fluidized beds, 177
Particle shape
effect of, on spouting properties of non-spherical particles, 59
Particle size distribution
rheological and fluidization behaviour of powders of different, 127
Particle size effect
in microwave heating of granular materials, 225
Particle size measurement
novel vibrating reed technique for, 161
Particle size sorting
vibratory, in multi-component systems, 148
Percolation
modelling fragmentation by, in combustion of carbons, 47
Percolation theory
elucidation based on; compaction behaviour of particulate materials, 265
Pore structure
evolution of: thermomechanical deformation of powder-based porous Al, 9
Potassium
production of fine flaky ground particles of potassium graphite intercalation compounds and potassium exfoliated graphite, 85
using conductivity method to study simultaneous Ostwald ripening and agglomeration of potassium sulphate in its saturated aqueous solution, 75
Powder processing
multiphase flow measurements in, 203
Pyrolysis
conditions of optimal dispersion of Zr powders by, of zirconium acetates, 237

Reynolds number
influence of particle, on voidage at fluidization, 97
Rheological behaviour
and fluidization behaviour of powders of different particle size distribution, 127

Segregation
in fluidized powder of a continuous size distribution, 119
Settling velocity
single-particle, through liquid fluidized beds, 293
Single-particle settling velocity
through liquid fluidized beds, 293
Solid–solid interactions
comparison of tensile strength theory with experiment using model powder, 89
Spherical particles
packing and fluidization properties of binary mixtures of, 259
Spouting properties
effect of particle shape on, of non-spherical particles, 59
Surface energy
of solids from ultrasonic studies of particle assemblies, 101
Suspension
flow of, of fine particles around steel ball fixed in cylindrical pipe, 285

Tensile strength theory
comparison of, with experiment using model powder: solid–solid interactions, 89
Thermomechanical deformation
of powder-based porous Al:
constitutive model including densification hardening, 21
evolution of pore structure, 9

Ultrasonic studies
surface energy of solids from, of particle assemblies, 101

Vibrating particle beds
wall shear stress in, 243
Vibrating reed technique
novel, for particle size measurement, 161
Vibratory particle size sorting
in multi-component systems, 148
Video image analysis
characterization of powders by, 171

Voidage
influence of particle Reynolds number on, at fluidization, 97

Wall shear stress
in vibrating particle beds, 243

Water content
effect of, of organic fluids on agglomeration of glass particles, 53

Zirconium
conditions of optimal dispersion of Zr powders by pyrolysis of zirconium acetates, 237
